

TITLE:

Green Angkor

PROJECT DESCRIPTION:

Cambodia is best known for its natural and cultural heritage sites. Angkor region has been the world most famous temple; at the same time, its vulnerability needs to be taken care of. Since the number of external tourists every year increased by 15.6% plus the aggressive growth of population, Angkor region has faced the loss of its attraction due to the fact of waste increase brought about by the consumption, tourists industry including restaurant, hospitality and so forth. It poses a great concern on local people in SIEM REAP in terms of health and it also does harm to the beauty of the Angkor region, which is the potential source of income to the national budget. The Green Angkor project is implemented to raise the awareness on the harmful effect of improper waste disposal and to as well urge the habit of good standard of living, more importantly, it adds definition to the beauty of our Angkor areas. Additionally, this project is initiated in the hope of gathering youth together and empowering future leaders to act on their behalf to contribute to green environment. This project is going to be run in three days. Each day carries different activities ranging from workshop, lectures, practices and entertainment. We believe that this project is going to bear great outcomes, for our project reaches to a larger scope of people both in local area and the nearby region.

Team Members:	Role
1. LAY Channanika	Organizing Committee
2. YIM Rodel	Public Relation

Other Volunteers (<i>non alumni</i>):	Role
1. University Students	Provide training to targeted students in Siem Reap and Lead them during the cleaning event

Partner Organizations:	Description & Role
------------------------	--------------------

1. APSARA Authority	APSARA Authority gives permission for the project to run around Angkor areas.

3. FUSAAC	FUSAAC is to provide the trainers in the field of environment for the volunteers
4. SIEM REAP Authority	The institution could facilitate with the flow of the projects.
5. SIEM REAP school principles	Facilitate the project in terms of permitting and gathering students.

AUDIENCE/Those who benefit:

1. Students from 10 schools in SIEM REAP province
2. Local People specifically the sellers
3. Tourists

LOCATION:

SIEM REAP Angkor

INNOVATION:

(Why is this unique and worth funding)

SIEM REAP is the tourists' destination of all tourists' inflow in Cambodia. The number of tourists is increasing annually up to 2.1 million tourists each year. The more tourists means the more concerns in environment. One of which will be run in this project is trash concerns. The understanding of trash concerns could ensure the public health of local people, beautify the environment around the attractive sites, and impose the habit of proper disposing. This project could contribute to sustaining the environment and the number of tourists in SIEM REAP.

PHOTOS:

GOALS & OBJECTIVES:

1. Raise awareness of loitering
2. Promoting Clean environment around tourists sites

3. Influencing the good habit of disposing wastes of the local people and tourists
4. Empowerment youth and future leaders of Cambodia to initiate the like project in other areas which are suitably implemented through a budget package

TIMELINE & ACTIVITY LIST:	
DATE	What You Will Accomplish
March 11, 2013	Final Proposal Submitted to East-West Center staff for review
April, 2013	<ul style="list-style-type: none"> - Proposal gets approved. - Our team starts to find sponsors.
