

Title: Making home-made organic products and composting training and Bicycle campaign project

The project targets on youth from respective local organizations who are interested in Environmental issues. It will be 3 days program with various activities include such as bicycling campaign, making organic products and making compost. As this training focuses on learning through experience, the participants will acquire informative knowledge and concepts of environmental issues and useful ways of making organic products. Especially, this program tends to motivate the energetic youth and expand network for the future environmental activities.

Bicycle campaign aims youth to aware pollution and the attraction of the public as “action speaks louder than words”. Then a training of making organic products for home use expects the youth to know the methods and to discuss on chemical products and organic products. A field trip to organic farm and learning composting tends to compare and contrasts the organic foods and GMO. With all those experiences, participants can apply their knowledge back to his organization.

Objective: Organizing youth to obtain informative knowledge on Environmental issues, learning through experiencing and involving activities and to make strong youth activists network.

Expected Outcome: To understand vividly on environmental concepts and deep passion for greener environment and public awareness on environmental issues.
